CORN GLUTEN MEAL

TYPICAL NUTRIENT CONTENT OF CORN GLUTEN MEAL

WHAT IS 60% CORN GLUTEN MEAL?

The 60% corn gluten meal product is a result of the corn wet milling industry. To create corn gluten meal, any fiber, starch or oil must be separated from the protein components of the corn kernel endosperm.

Corn gluten meal is an excellent protein source, commonly used in petfood and aquaculture diets. This feed ingredient is high in xanthophyll content and is quite palatable.

It is granular to powdery in texture and typically has a yellow or yellowish brown color.

All values presented on as-fed basis:

Dry Matter	88.0%
Crude Protein	60.0%
Crude Fat	2.85%
Crude Fiber	1.86%
Ash	3.02%
Calcium	0.03%
Phosphorus	0.47%
Potassium	0.27%
Sulfur	0.75%
Magnesium	0.10%
Total Digestible Nutrients	85.56%
Poultry Metabolizable Energy	3647kcal/kg
Swine Metabolizable Energy	3707kcal/kg
Methionine	1.48%
Cysteine	1.04%
Lysine	0.96%
Tryptophan	0.29%
Threonine	1.92%
Isoleucine	2.28%
